New Zyto Elite Scan

The Zyto Biocommunication Technology is a unique tool for locating deficiencies in the body and determining which specific dietary, lifestyle, and supplemental changes will have the most lasting impact on bringing the body into homeostasis. In the 1930s it was discovered that the body's largest organ, the skin, is electrically conductive and that its conductivity changes as stressors are exposed to it. This change is known as the Galvanic Skin Response or GSR. The Zyto machine monitors the GSR of the body, interprets it, and decodes it into the computer system. This virtual conversation with the body allows the machine to precisely determine what deficiency trends are present and what specific changes will work to return balance to the body.

ZYTO™

MADE SIMPLE

WHAT IS A ZYTO SCAN?

Scans are organized into what are called biosurveys. You've probably filled out a survey before; a series of questions that you provide answers to. A biosurvey is essentially the same thing, only you don't answer the 'questions' consciously, your body answers them directly. With biocommunication scanning, the 'question' is the Virtual Stimulus Item or (VSI) and your response, which is recorded and analyzed by the ZYTO software, is a change in the electrical properties of your skin.

Different biosurveys will include different VSIs. Some biosurveys are general in nature and include VSIs concerned with overall wellness, others include VSIs relating to specific areas of the body or body processes, and some may deal with environmental factors. A biosurvey can be as varied and versatile as any other survey.

ZYTO products help you make better decisions about your health. That's why ZYTO technology is referred to as decision support technology. It's important to note that ZYTO scans do not treat or diagnose.

HOW OFTEN SHOULD I BE SCANNED?

Regular ZYTO scanning will provide you with up-to-date biocommunication information as your body changes. Your wellness advisor will guide you with the specific scan schedule best for you.

WHY GET ONE?

Health practitioners use ZYTO products to help them make better wellness maintenance decisions for their clients. That's why ZYTO technology is referred to as decision support technology. It's important to note that ZYTO scans do not treat or diagnose.

IS IT SAFE?

There are no known contraindications for properly administered ZYTO scanning. The amount of energy used in a scan is so low that it is safe for infants, children, adults of all ages, for people with pacemakers, and pregnant women.

Dr. Ward is offering a special promotion for the Zyto Elite! Until September 30th, 2015, the scan is \$99. On October 1st, the scan will increase to a new regular price of \$150. This scan includes both the Basic Body and Toxicity scans.

Rescans for both the Basic Body and Toxicity scans are \$85. Individual scans are \$45 each.

The scans require a separate appointment with Dr. Ward. She will walk through the results of the scan and customize a health plan for each individual. This appointment is 1 hour in length and costs \$85.

Updates from Foundations for Health

Dr. Ward is excited to announce that she has completed her Health Coach Certification! This certification is in clinical nutrition and weight loss, focusing on nutrition, body types, and health. Our current medical model teaches that one must lose weight in order to become healthy. The reality is that one must become healthy in order to lose weight! She would love to teach you how to reclaim YOUR health! Contact the office today for more information.
